

# M365 Copilot and Work IQ: Powering Agent Business workflows

**Julie Koesmarno**

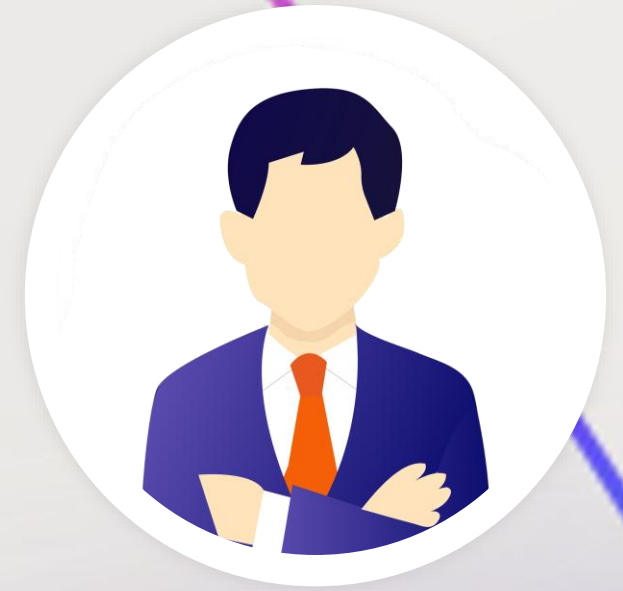

Principal Group Product Manager  
| Microsoft Dataverse

“ There’s new guidance about vendor selection.  
For overdue issues, please suggest which vendor to assign to.

Productivity  
data

Real-time  
business data

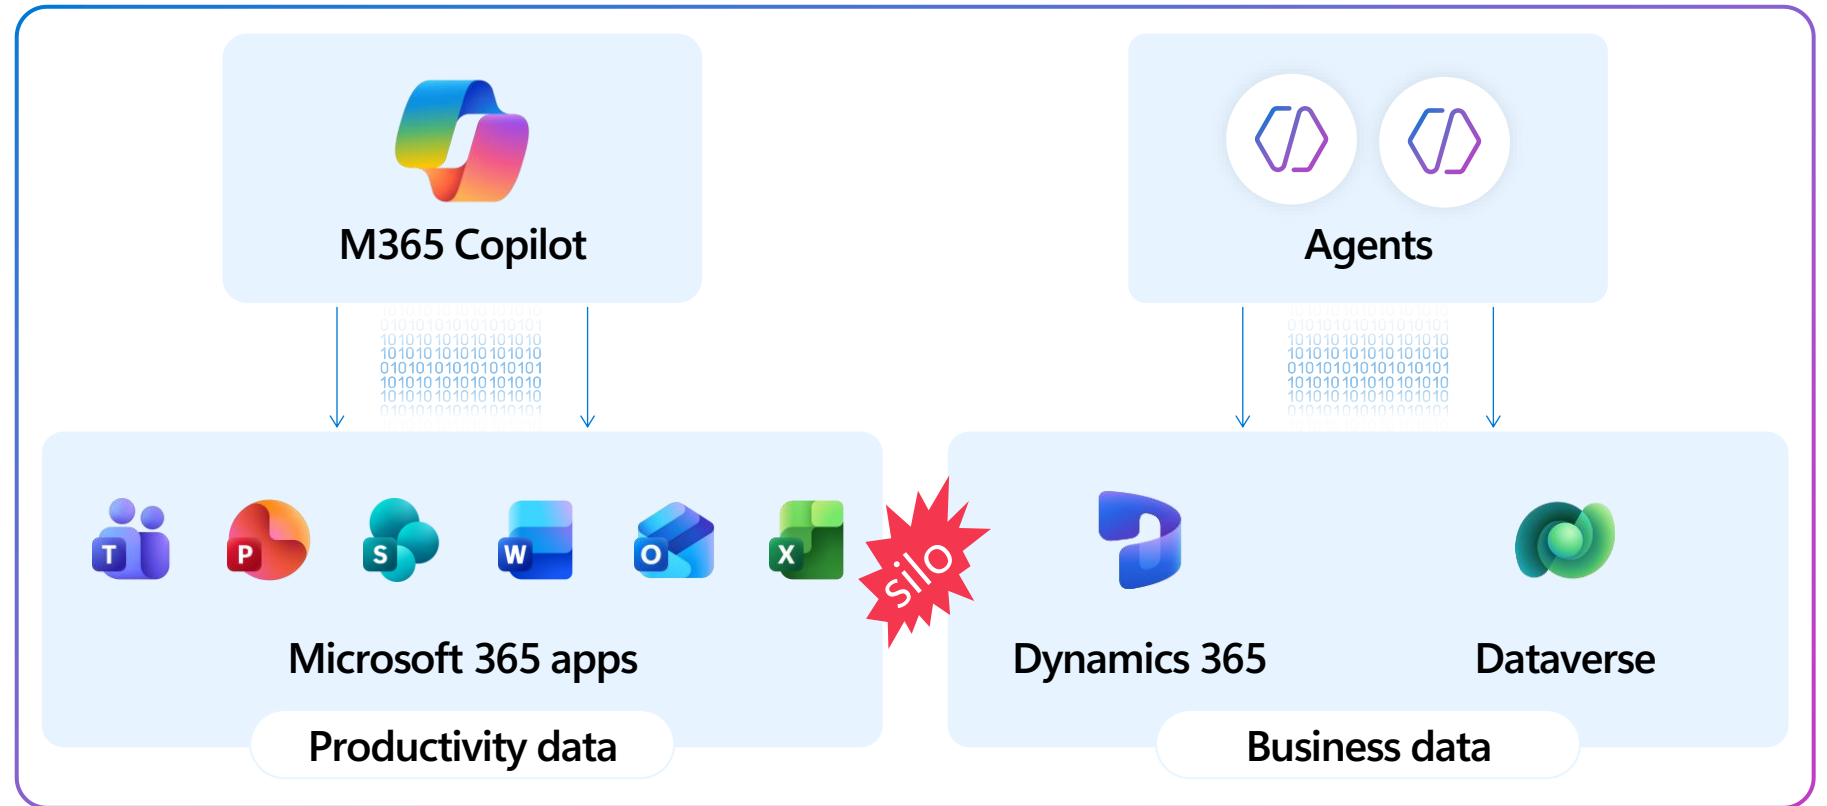

*Persona: **Business Users***  
Site coordinator  
@ Zava Construction

# Before

User  
experience

Data layer

The Challenge

## Missing Business Context

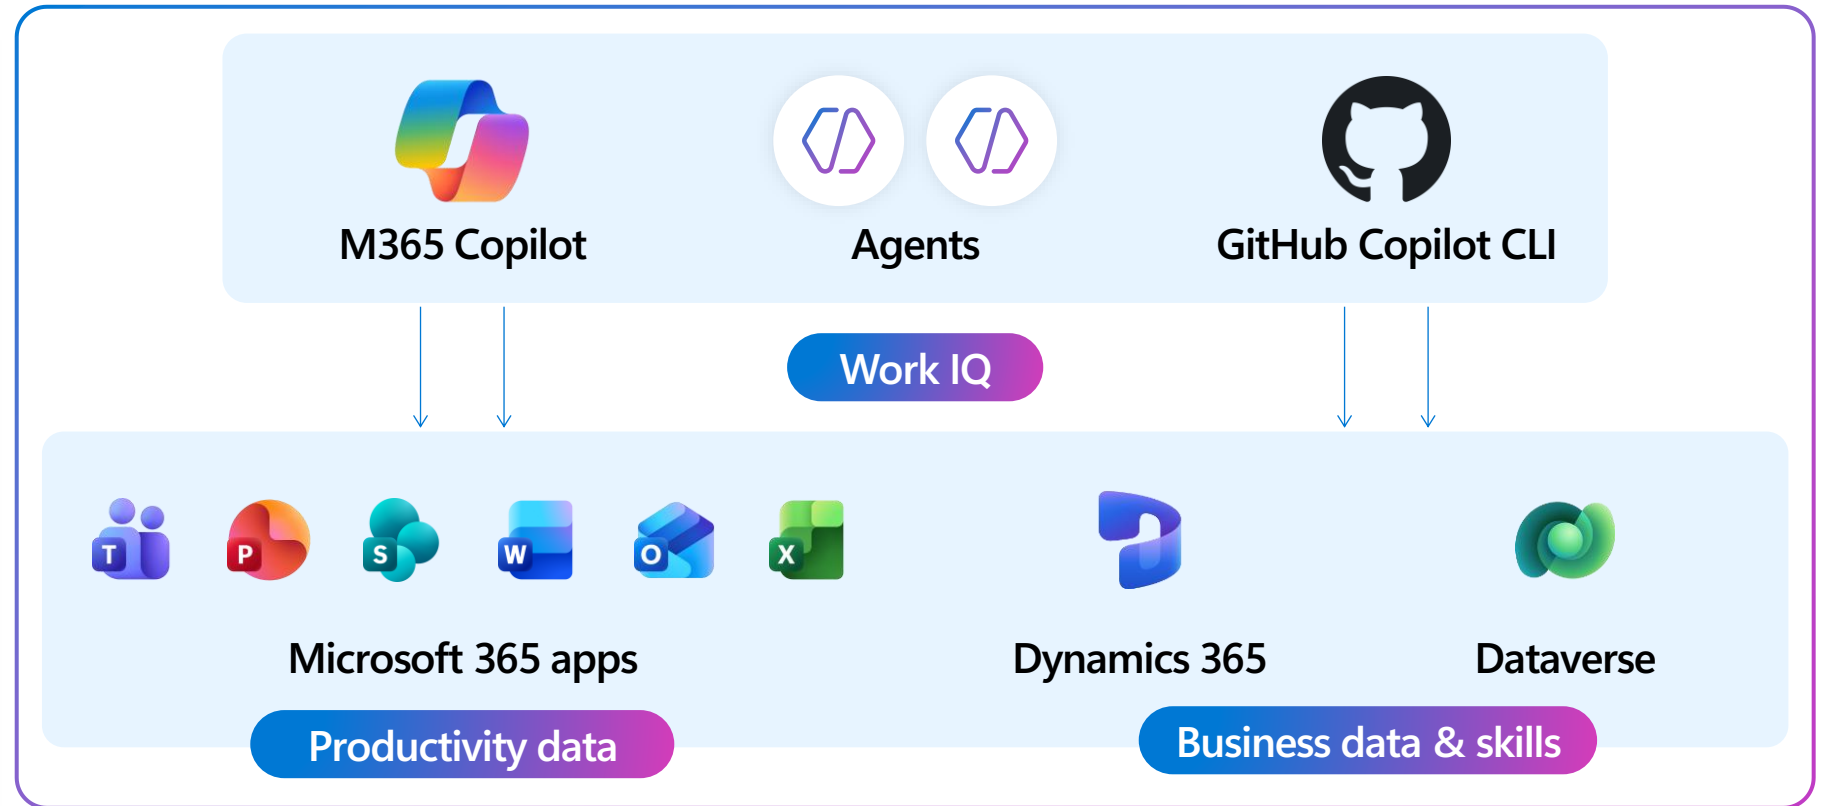

- Business data stored in CRM or custom apps built with Dataverse was not available
- Hard to combine productivity and business data to get meaningful insights
- Customizing agents to understand organization specific workflows can be cumbersome

# And now ...

Common  
experience

Data layer

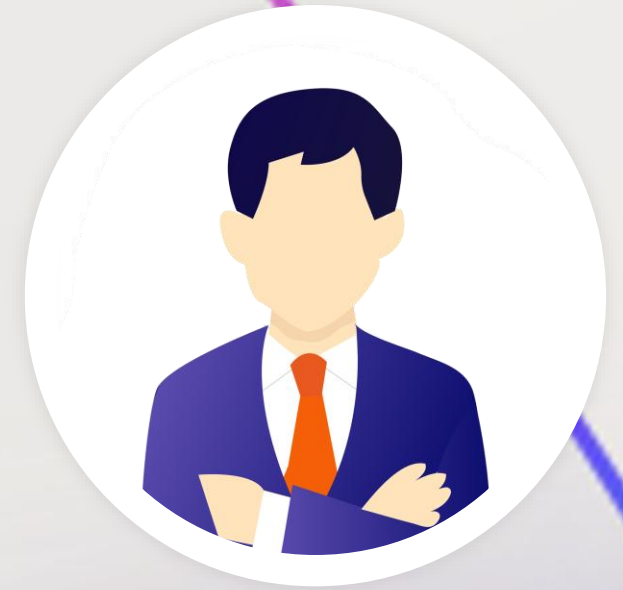

The Solution

- Work IQ means M365 Copilot can access business data stored in Dataverse just like it can access productivity data.
- You can build your own agent that accesses both productivity data and business data easily with Dataverse MCP server and publish to M365 Copilot.
- Leverage Business Skills for customizable and adaptable agentic business workflows.

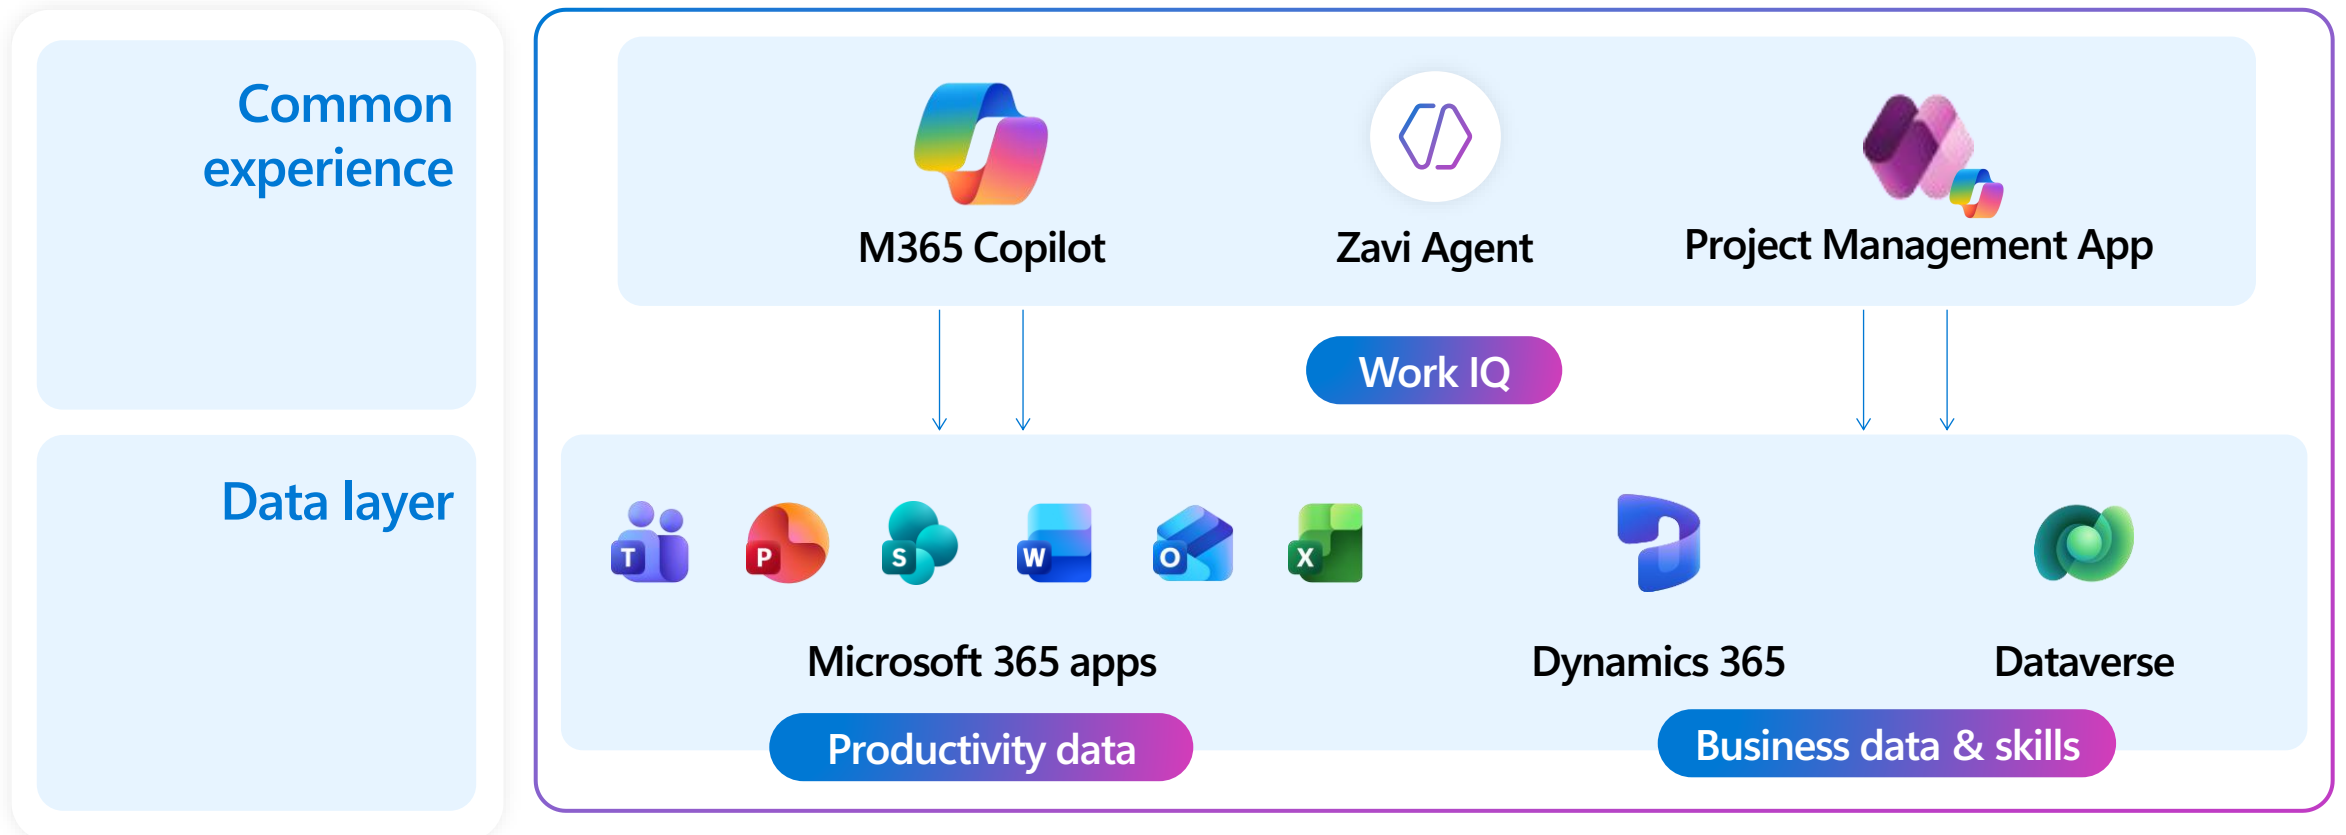

# Demo

Agentic business workflows in  
M365 Copilot with Work IQ and Dataverse

# Enable M365 Copilot in Power Apps & D365 Sales / Customer Service

1. Turn on **Power Apps > M365 Copilot Chat** from Power Platform Admin Center.
2. Enable **M365 Copilot in-app** model-driven apps in the app settings

<https://learn.microsoft.com/en-us/power-apps/maker/model-driven-apps/add-microsoft-365-copilot>

# Step-by-step

How to build an agent in Copilot Studio that uses Dataverse MCP, Business Skills, and publish to M365 Copilot

*Persona: Agent Developer*

# Build your business-aware agents more easily

Configurable and reusable **business skill** to define your business workflow, that can adapt to your needs, stored in **Dataverse**

Use **Dataverse MCP Servers** and **Work IQ MCP Servers** as tools for your intelligent agents

Create your agent and run evals in **Copilot Studio** and publish to **M365 Copilot**

## Test case details

Show activity map X

### 75/100 - Mostly same meaning

The agent answer gives all the important details about the plumbing problem at AC Innovative Main Campus, including who is handling it and when it should be fixed. It also adds useful extra information like contact details, which helps understand the issue better. There are no mistakes or missing parts, so the answer matches well with what was expected.

## Details

Name  
Zavi

 Edit

### Description

434/1024

Zavi is your construction project management assistant for Zava Construction. Zavi helps site coordinators track projects, monitor open issues, assign vendors, and stay updated on what needs attention—especially after time away. Connected directly to your Dataverse data, Zavi provides real-time project status, identifies problems requiring action, and executes vendor assignments while following your established business processes.

### Select your agent's model

Your agent will primarily use the model for reasoning and responding. Experimental models are subject to [preview terms](#). [Learn more](#)

### Instructions

 Edit

When you are mentioned and asked to review status reports and handle critical vendor assignments, use the dataverse MCP server to find relevant skills for the workflow. Then use that skill information to conduct the entire process laid out in the skill. Use the dataverse mcp server tools and outlook tools as mentioned in the skill. Dont use the exact column names from the skill directly, use describe tool in dataverse mcp to find our table details and then continue following steps laid out in skills.

DO NOT UPDATE THE BOT COMPONENT TABLE

Use this unique app name whenever you need it: `crb26.ProjectManagementApp`
