

Microsoft: Transform business data into full business solutions with AI in Dataverse

Julie Koesmarno

Principal Group Product Manager
| Microsoft Dataverse

Frequently asked question at this conference

**How do I introduce agents to
my organization?**

Agenda

01

AI / Agents adoption journey

02

Three patterns to get started with hyperscale and enterprise agentic workflows with Dataverse, Fabric and Work IQ

03

Takeaways & References

Your organization's needs are evolving

**Established pattern:
Apps-first**

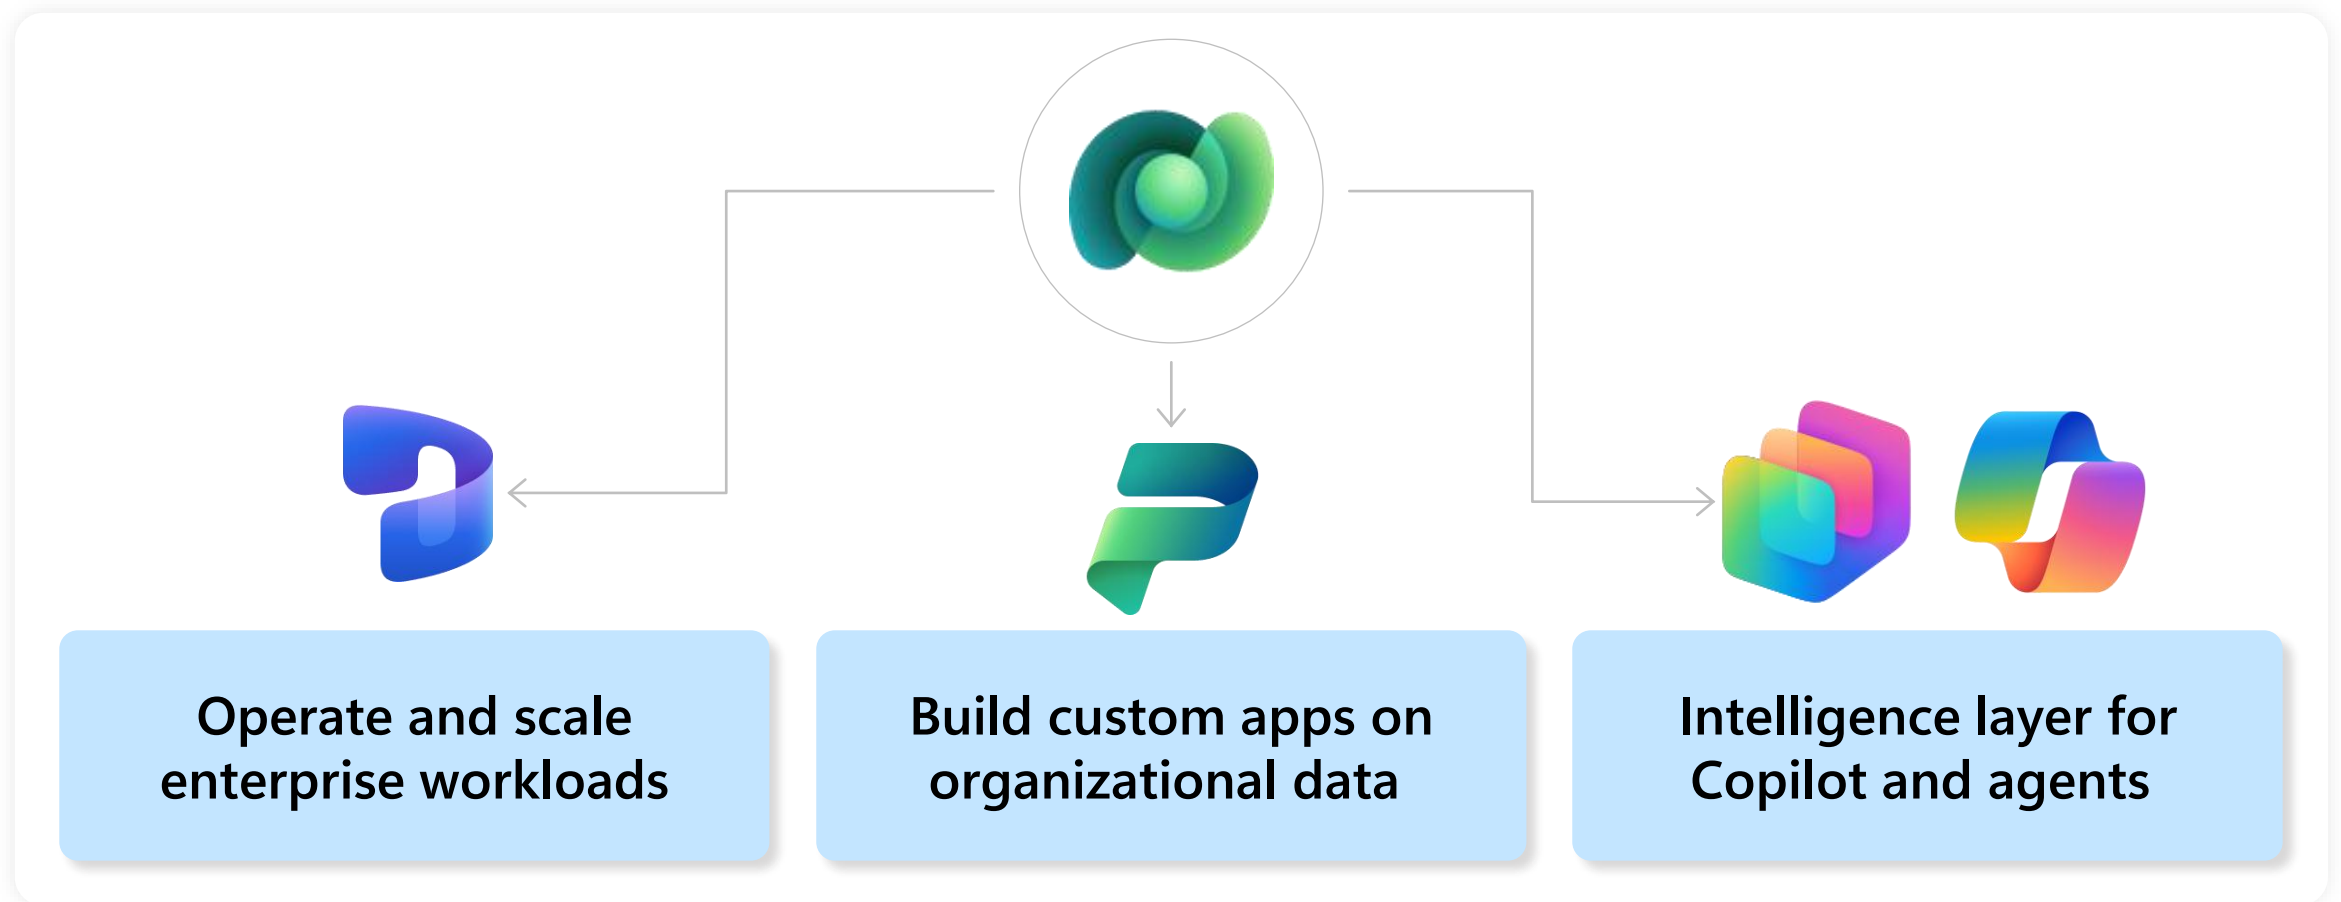

Dataverse is the data platform under Dynamics 365 and Power Apps where all structured business data lives

**Accelerating pattern:
Apps + AI**

Agentic usage over Dataverse is growing led by Copilot Studio & in-app agents

Dataverse, the enterprise data platform, that bridges apps and agents

Dataverse – Hyperscale SaaS data + AI platform

Polyglot storage – Any data, any size

Relational
structured data

Unstructured
data (Files, blobs)

Observational
data (Logs)

Managed
Data Lake

Integration with
Fabric One Lake

Unlimited
scale and storage

Long Term
Retention

Elastic
Tables

Insights
with Fabric

1,600+ Power
Platform connectors

“
Notify my team of RFIs that can potentially cause project delays.

Real-time
business data

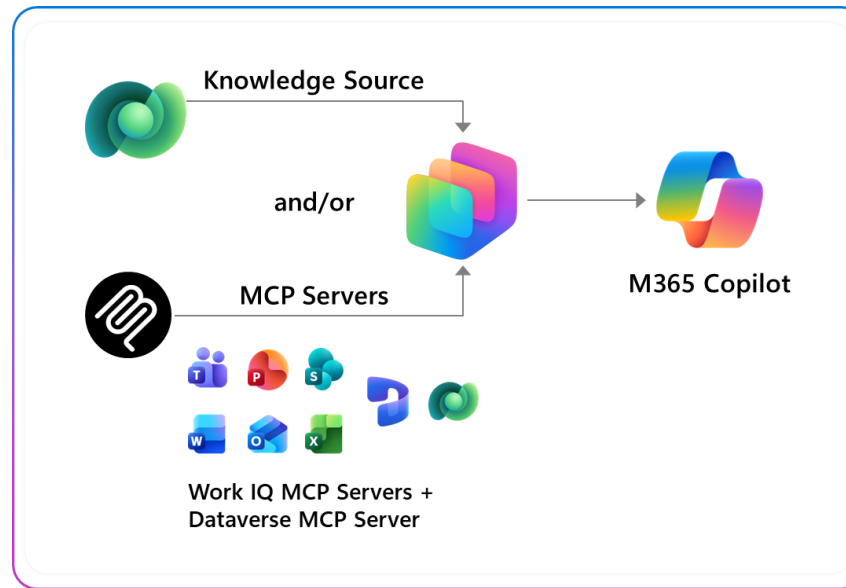

“
Send an analysis report related to orders and suppliers had most delays *last year*.

Analytical data

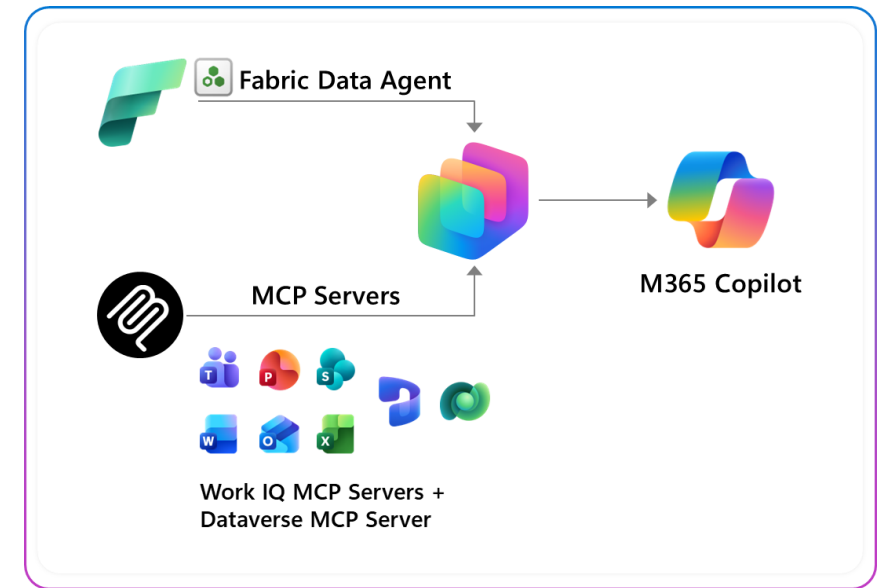

*Persona: **Business Users***
Site coordinator
@ Zava Construction

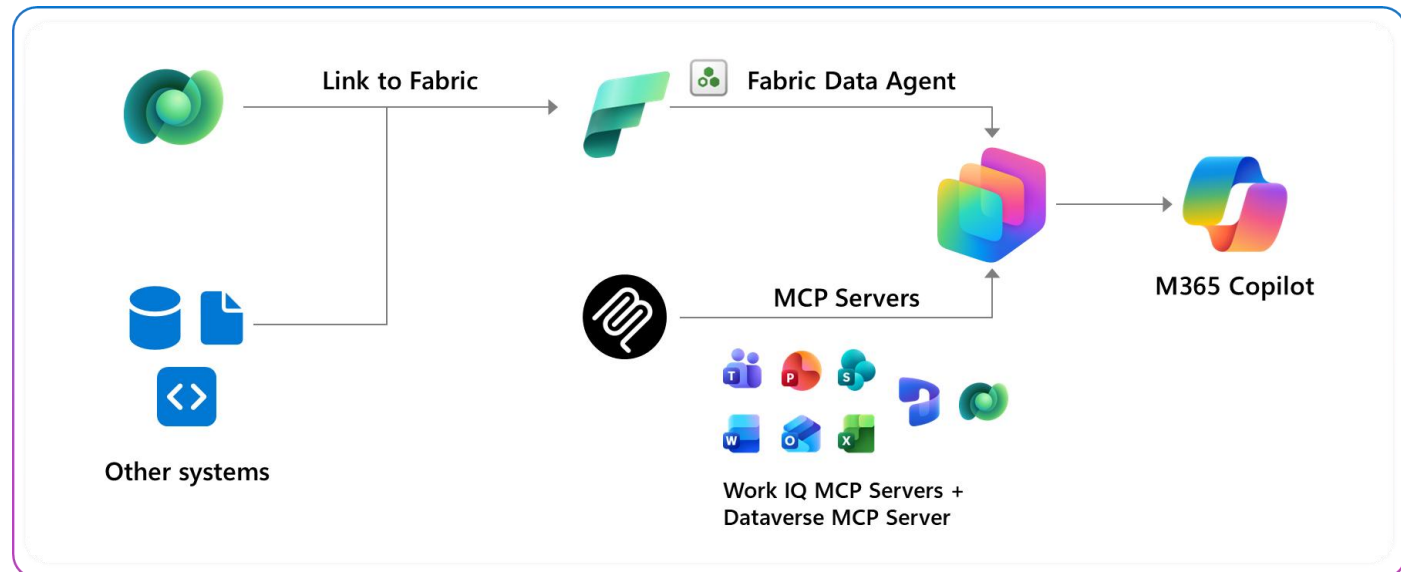

Three patterns to get started with agentic business workflows

Pattern 1: Real-time workflows

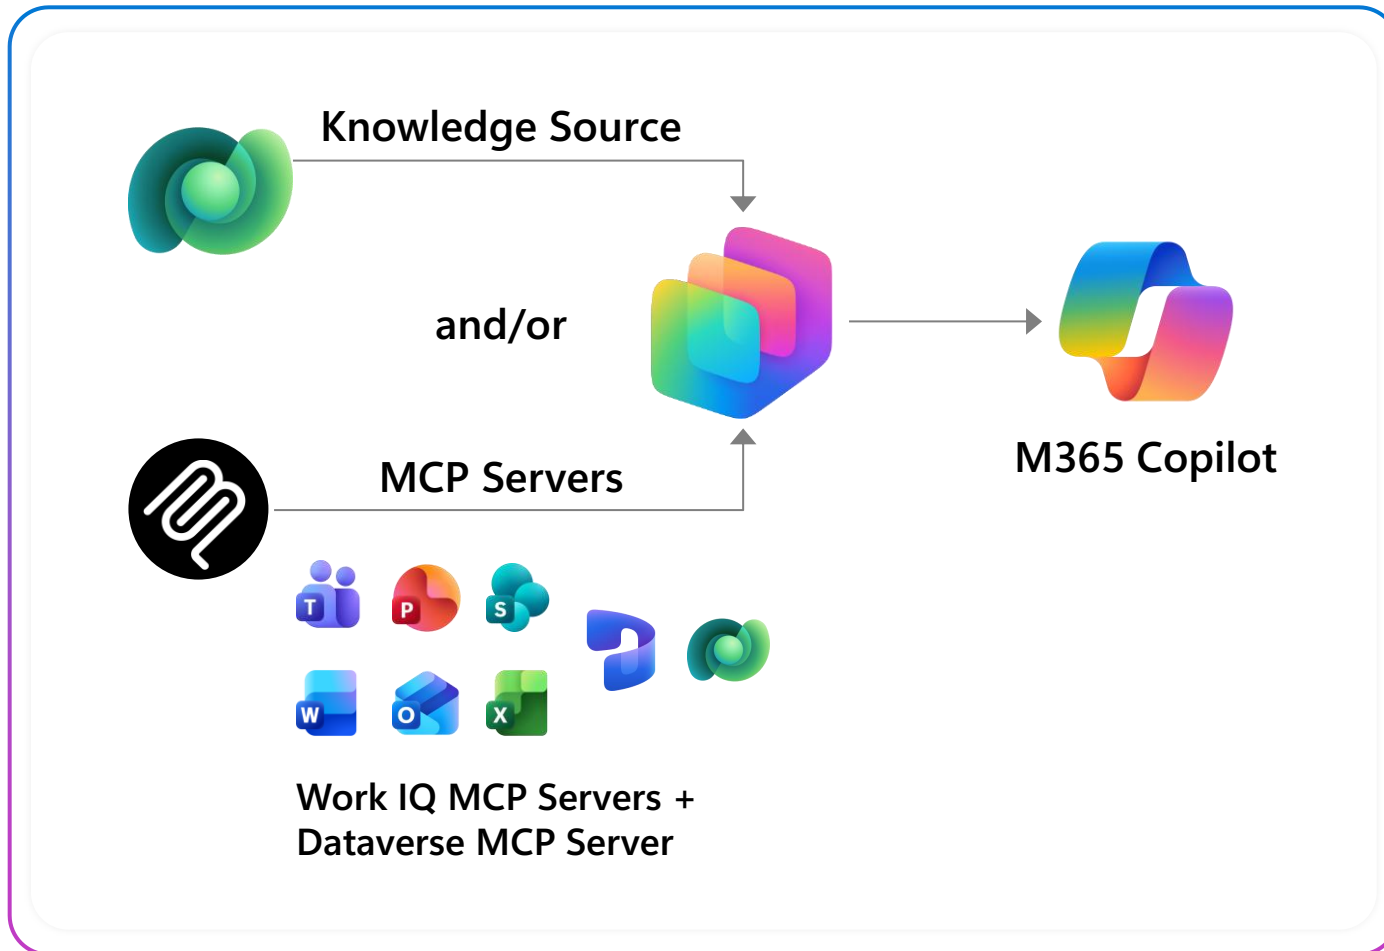

Pattern 2a: Real time + analytical workflows

Pattern 2b: Real time + analytical workflows

Pattern 1: bringing agentic workflows (real-time)

Dataverse as Knowledge Source for grounding your agents with business data (including *Prompt Columns*) with Agentic Dataverse Search

MCP Servers for agentic workflows in productivity and business e.g., Work IQ MCP Servers and Dataverse MCP Servers

Copilot Studio as your low-code agent IDE bringing the agentic and analytical workflows

M365 Copilot as your common end-user interface

“
Notify my team of RFIs that can potentially cause project delays.

Real-time business workflows

“
Send an analysis report related to orders and suppliers had most delays *last year.*

Analytical business workflows

RFI.subject

into one of these categories 'Slight delay', 'As per schedule', 'At Risk', or 'unclear'. Analyze the key themes and context of the provided text and classify it into the most appropriate category from the list of categories. Take into consideration any subcategories, industry-specific terminology, and the possibility of ambiguous classification. If the text does not clearly fit into a single category, pick the closest category or label it as 'unclear'. Your answer may only have the exact text of the closest category. Do not explain and do not use categories not listed.

RFIs at Risk

Summary: 2 RFIs have been identified as at risk, with a combined cost impact of **\$4,500** and schedule impact of **6 days**. Both items are significantly overdue and require immediate attention.

At Risk Items

1. RFI005 - Foundation Issue

- Status: Open
- Priority: High
- Required Date: May 30, 2024 (overdue by ~21 months)
- Schedule Impact: 4 days
- Cost Impact: \$2,500
- Assignment: assign_05
- Days Open: 9 days

2. RFI007 - Electrical Fault

- Status: Closed
- Priority: Medium
- Required Date: July 15, 2024 (overdue by ~20 months)
- Schedule Impact: 2 days
- Cost Impact: \$2,000
- Assignment: assign_07
- Days Open: 9 days

Total Impact Summary

- Combined Cost Impact: \$4,500
- Combined Schedule Impact: 6 days
- Both RFIs significantly overdue

Recommendations

1. Immediate Action on RFI005 (Foundation Issue): This high-priority item has the largest schedule impact (4 days) and significant cost exposure (\$2,500). Despite being overdue by 21 months, it remains open. Escalate to senior management and assign additional resources to resolve immediately.

2. Review Closure Status of RFI007: While marked as closed, RFI007 (Electrical Fault) is still flagged as at-risk with a 2-day schedule impact. Verify that all associated work has been completed and that the risk has been properly mitigated. Update risk status if resolved.

3. Implement Risk Review Process: Both RFIs have been open for exactly 9 days but are overdue by approximately 20+ months from their required dates. This suggests a potential data quality issue or gap in the risk tracking process that needs immediate investigation to prevent future items from reaching critical risk status.

Prompt Column in Power Apps

Public Preview

Use generative AI to enrich your business data in columns, at scale

→ Embed GenAI directly into your data model

→ Example use case: Generate reliable sentiment and output

→ Improve downstream experience

To learn more, see docs: [Prompt columns](#)

Dataverse Model Context Protocol (MCP)

GA

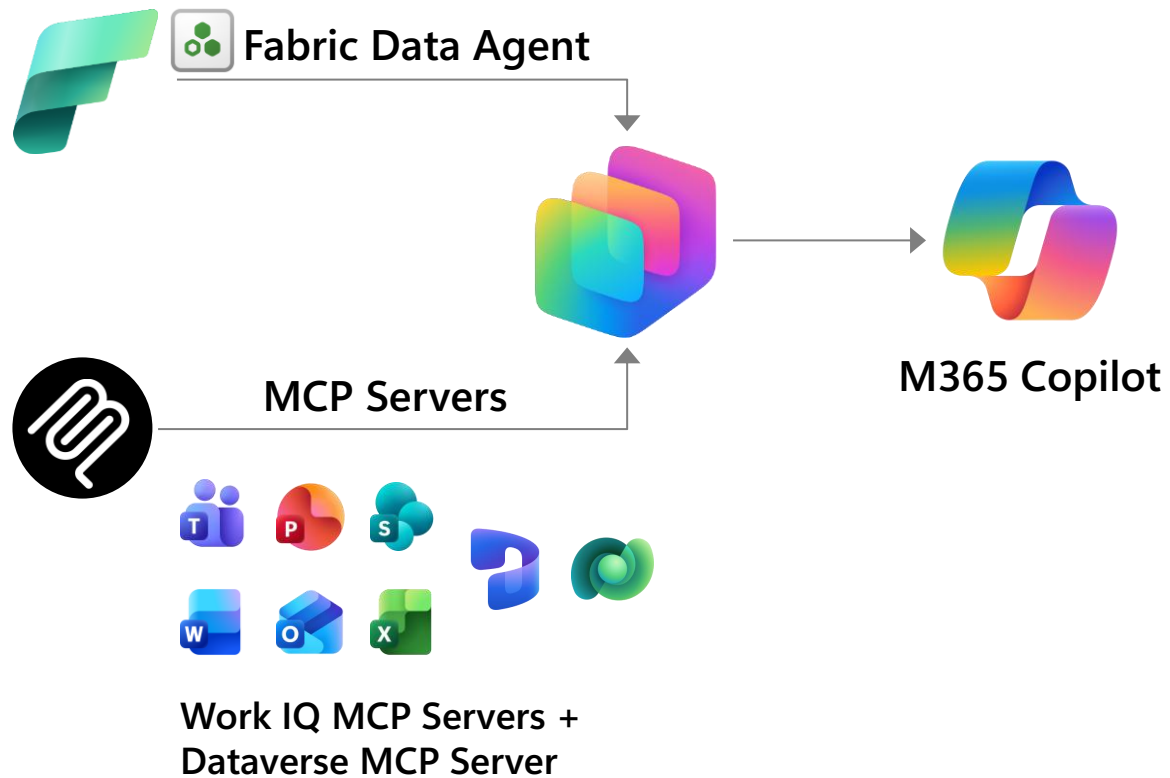

Unlock a new level of integration between AI and data

- Simplify AI-to-data access with MCP
- Get real-time responses from the Dataverse using Natural Language
- Available in Copilot Studio, VSCode GitHub Copilot, Claude

The screenshot shows the Pulse dashboard interface. At the top, there's a navigation bar with 'Pulse' and several tabs: Overview, Knowledge, Tools, Agents, Topics, and a '+4' button. Below this, a section titled 'Test your agent' displays the status of the 'Microsoft Dataverse MCP Server'. The server is shown as 'Initialized' with a blue 'Initialized' badge. Below the server name, there's a circular progress indicator and the text 'In progress'. A modal window is open on the right, titled 'Microsoft Dataverse MCP S...' with a close button. It shows the server is 'In progress' and 'Initialized'. The modal contains a 'Description' section stating 'Provides Remote MCP Server access to Dataverse'. Below this is a 'Tools' section with a table listing available tools.

Tool name	Description
list_tables	This tool gets a list of all tables in the dataverse and return an array of table names. This doesn't retrieve the tables from external sources.
describe_table	Get the TSQL schema definition of a table in the Dataverse database Dataverse SQL supports only basic SELECT

Pattern 2a: bringing agentic workflows (real-time business systems & analytical)

Fabric Data Agent for analytical workloads

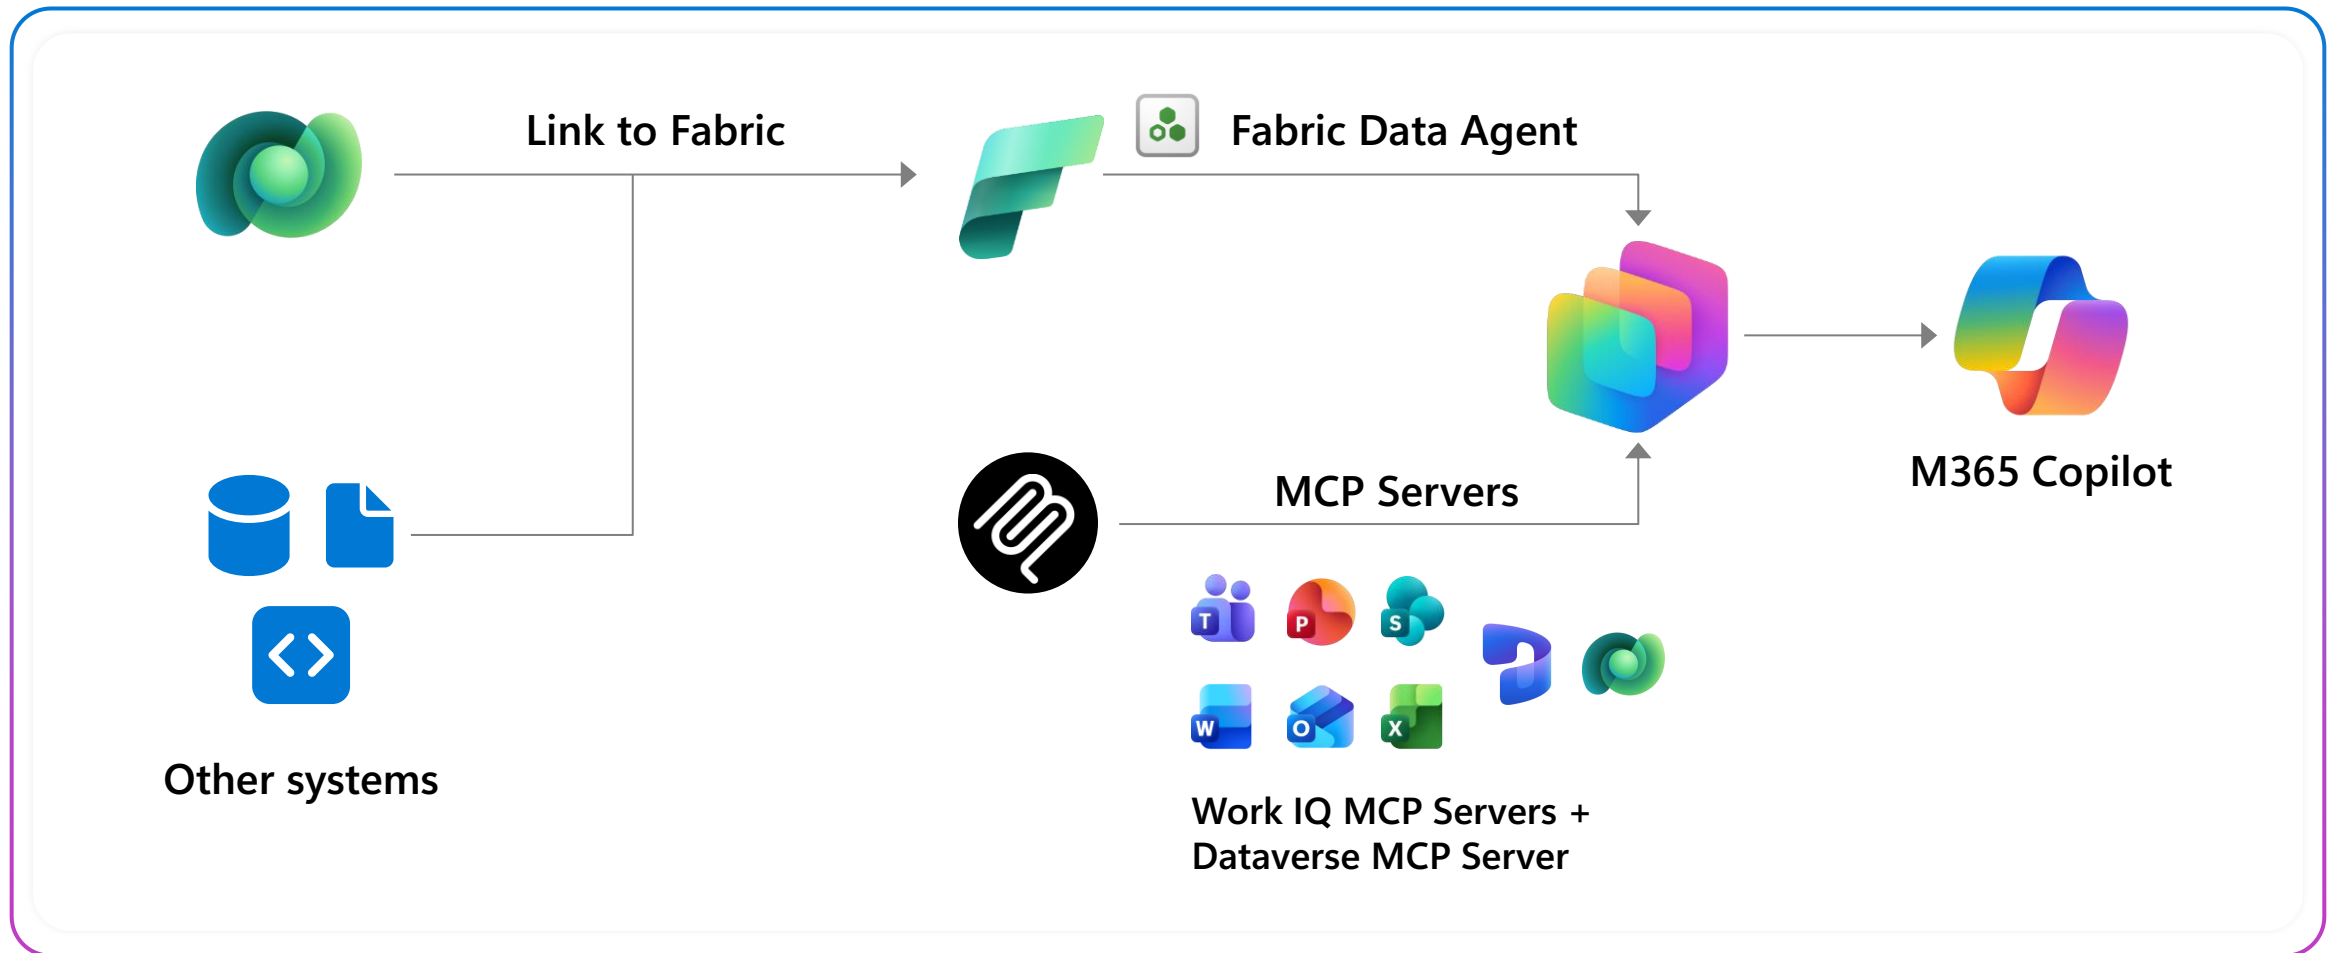

MCP Servers for agentic workflows in productivity and business e.g., Work IQ MCP Servers and Dataverse MCP Servers

Copilot Studio as your low-code agent IDE bringing the agentic and analytical workflows

M365 Copilot as your common end-user interface

Pattern 2b: Bringing agentic workflows (real-time business systems & analytical)

Extend your analytical workload to include other systems

“

Notify my team of RFIs that can potentially cause project delays.

Real-time business
workflows

“

Send an analysis report related to orders and suppliers had most delays *last year*.
